Artificial Intelligence Solutions

AI Chat
Key features include intelligent routing, conversation capabilities, and enhanced response quality with consistency and clear source references.

AI Search
Easily integrates as a widget on your website and provides AI-powered summaries, metadata-driven filtering options, and follow-up question prompts.

Advanced AI Search
An internal enterprise search app that helps employees find answers and documents specific to the organization.
Utilizes an advanced configuration panel that allows users to customize search results and follow-up question prompts to provide more clarity.

NLP Search & Chat
Connect to a structured database and get answers based on natural language questions. Chat with an agent within the search and easily pull data using natural language queries.
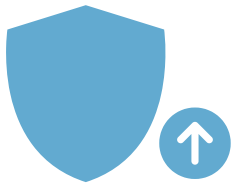

NLP Visualization
An advanced data visualization application that allows users to use natural language to query data instead of manually configuring filters. AI translates questions into proper database language (SQL).
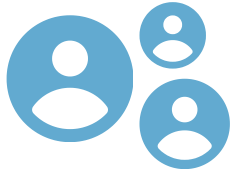

NLP Validation
An application that helps you verify data quality with a simple step-by-step process. The system retrieves relevant guidelines from a knowledge base (data dictionary) and helps users make informed decisions about query execution.

Compliance Management

Automates contract compliance using advanced AI analysis to ensure users adhere to the organization's specific regulatory requirements.

Case Management

Sends support tickets to an AI agent that finds a solution and forwards it to a human in the loop for quality assurance.

Document Digitizer AI

Scans and digitizes any type of form or document, reducing both time and errors associated with manually entering information into a database.

Slack & Google Chat AI Assistant

An AI agent that provides guidance for internal processes at an organization. It retrieves information from Internal documents and answers questions that would normally require feedback from HR or IT personnel.

AI Property Insights System

An application designed to improve the data quality of federal property records by validating them against external sources and cross-referencing between multiple datasets. It aims to provide consistent property information to support better decision-making.

AI Proposal Evaluation System

Analyzes government proposal requirements and lists the strengths, weaknesses, and risk assessment of a document before submission.
