XCavate
Dig Your Data in Salesforce

XCavate, developed by CloudWave, provides on-demand and scheduled daily backups of your Salesforce records with powerful advanced search tools to help you "dig your data" and find the records you need to recover faster than ever.

Key Features

Scheduled and On-demand Backups:
Customize the objects or event log types you need to back up and schedule for any day or time.

Backups Available 24/7:
Access your data instantly without any complicated requests!

Backups Without Limits:
No time or data size limits.

Permanent Retention of All Logs:
Find out who did what within your Salesforce event logs, dating back as far as you need.

Advanced Search Capabilities:
Search by object or event type, file name, time period, and more to help you recover your records faster.

Protect Your Data

Do you have a simple way to back up your Salesforce data?

Let's say an HR professional accidentally deletes an employee's info, or untested code from the IT department breaks your org and impacts records.

When a Salesforce object record is deleted, it stays in the recycle bin for 15 days before it is deleted permanently. Retrieving it later is impossible. XCavate schedules daily backups of your system so that you can rest assured your data is accessible, no matter what happens.

Find Specific Records

Can you find old records in Salesforce with a few clicks?

Imagine looking for a needle in a haystack, or mining foe precious gemstones with a regular garden spade. This analogy is what it feels like to hunt through records manually within Salesforce: time consuming and frustrating. XCavate has advanced search capabilities powered by Elastic that make it easier than ever to locate and extract the record you're looking for instantly.
